

Tutorial - 6

In this tutorial, you will get acquainted with Message-Passing Interface (MPI) by running the hello-world programs that are available on Moodle and will be discussed in the upcoming lectures this week.

1. Finish up Tutorial-5 and questions/queries related to Assignment 1.
 2. Install and test either OpenMPI or MPICH library on your computer.
 3. Download the MPI hello-world program that is available on Moodle (from MPI Hello World folder) and compile and run the same. Convince yourself that the required number of messages are being printed depending on the number of processes you have requested.
